AGRONOMY

Golf Course Superintendent: Adam Wiles
 PGA TOUR Agronomist: PJ Ringenberger

The Glen Club experienced a mild winter and early spring which has advanced the golf course turf growth sooner than usual, providing good conditions moving into the summer golf season. The bentgrass greens are in great shape with excellent density and smoothness. The tees, fairways, and approaches are all in good shape and will provide consistent lies throughout the facility. The bluegrass rough provides a consistent playing area which will be maintained at 3” during advance week and then allowed to grow during the event. The original bunkers on the property show their age. When dry, the bunkers prepare nicely and the playability is good, but during rainy weather, the bunkers have difficulty draining and tend to stay wet. The club will undergo a bunker renovation starting in September of this year.

Quick Facts:

- The greenspeed will be in the range of 12 - 12.5 feet.
- The tees and approaches will be mowed at 0.450 inch.
- The fairways will be mowed at 0.500 inch.
- The intermediate rough will be mowed at 1.25 inches, and the primary rough will be maintained at 3 inches.
